At thsi moment we are running Mezzazine http://mezzanine.jupo.org/ (on olemassa myös api: http://gcushen.github.io/mezzanine-api/)

participants: tsw, ATS_, Holly

Latest version of mezzazine: 5.0.0 (released: 2021-11-22)
(https://github.com/stephenmcd/mezzanine/releases)
We are now running version: 4.3.1

Current problems:
* the site is ugly and messy
* writing new blog posts is not easy
* not really responsive

Requirements long term plan:
* the site needs to look nice
* mobile first design
* easy to add new blog articles (nice easy to use wysiwyg that automatically generates responsive content)
* either upgrade to latest mezzazine or find a new system
* LDAP to mulysa connection SSO/Keycloak
* visualizasion of hacklab economy
* more images on the front page and replace outside view image with some better image

First thing:
automatic deploy please

Short term plan:
header:
  * add link to "my membership" (mulysa)
  * use the correct logo
  * hide search completely (don't tell anyone and if no one complains then keep it hidden)
  * check the color and maybe remove the gradient
menu:
  * remove "sosiaalinen media" from menu
  * remove flickr from "palvelut" and move it footer some icons
content area
  * rethink breadcrumbs (maybe even remove completely)
  * remove side bars completely
Footer needs:
  * social media icons
  * contact information (address, phone number to lab, email info [at] tampere.hacklab.fi)
  * "tampere hacklab is a part of the Finnish hacklab community, read more at hacklab.fi"
  * link to rekisteriseloste
  * cookie modal (not required, we don't have cookies)
